

Statistical indicators of tuberculosis

During the study of pulmonary tuberculosis morbidity, the data on socioeconomic living conditions and harmful habits of the patients were obtained.

What method allows the assessment of the extent to which these factors influence the tuberculosis morbidity?

During the study of pulmonary tuberculosis morbidity, the data on socioeconomic living conditions and harmful habits of the patients were obtained.

What method allows the assessment of the extent to which these factors influence the tuberculosis morbidity?

- Calculation of the agreement coefficient
- Calculation of the correlation coefficient
- Calculation of the regression coefficient
- Calculation of standardized indicators
- Calculation of the confidence coefficient
